NRO REVIEW COMPLETED

STAT

Enclosed are the following:

1. Coded data sheet which identifies the samples as to Film Type, Format, and Brief History of each sample.
2. Samples of various formats -- edge flashed.

The purpose of this exercise was to demonstrate the capability and feasibility of "edge flashing" Ektachrome Reversal Film Types prior to processing. Thus we are then able to:

1. Title the original acquisition material.
2. Be able to reproduce (by printing) the applied title in each subsequent dupe copy.

We request that you perform the following:

1. Examine the samples supplied to you with the attached code.
2. Evaluate each sample.
3. Reject or accept each sample.
4. Provide a reason for each rejection.
5. Transmit the results of your evaluation to us. Attention: 

STAT

Because the "originals" were made from B&W copies, the color balance is distorted. We made no attempt to correct for color balance in any of the samples.

Enclosure: Attachment I
Samples (17)
